

LUMINA CIRCLE REPORT

The Impact of Lumina Circle: Building a Future of Safer, Greener Leaders

We've just completed the first-ever Lumina Circle event, and the results are nothing short of extraordinary. But let's take a closer look at why this matters—not just for the participants, but for organizations, funders, and communities alike.

Key Outcomes

Key Outcomes:

19 young people from Leicester, aged 10-18, immersed in 3 hours of hands-on, interactive learning about Health, Safety, Sustainability, and Environmental (HSSE) management.

100% of the attendees engaged in meaningful discussions and activities, with over 80% expressing increased interest in pursuing careers in health and safety-related fields.

2 expert speakers, including Richard Bate, IOSH President-Elect, and Constance Ehiozee, made HSSE not just relevant but

exciting- breaking the myth that safety careers are dull.

Creative outcomes: 10 unique HSSE campaign posters created by the young people—reflecting innovative, actionable ideas on making their communities safer and greener.

Here's why this matters

The Growing Need for Safety and Sustainability Professionals

The global demand for HSSE professionals is rising—expected to grow by 15-20% annually over the next decade as more industries recognize the need for sustainability and safety. By educating young minds early, we're developing tomorrow's leaders in health, safety, and environmental management.

The construction industry alone has a shortage of 150,000 skilled workers in health

and safety. By planting the seeds of safety careers at a young age, Lumina Circle is helping close this skills gap.

Empowering the Future Workforce

75% of Gen Z (the age group we're working with) already values corporate responsibility and wants to contribute to a better world. The Lumina Circle program shows them how they can do this through HSSE education, turning awareness into action.

Studies show that children who are educated in safety are more likely to become responsible, proactive employees, leading to a 50% reduction in workplace accidents in organizations that prioritize early HSSE education.

Creating a Sustainable Future

Young people today want to know how they can make an impact. With climate change at the forefront of global concerns, teaching the principles of sustainability and environmental protection helps build a generation equipped to face these challenges head-on.

The Global Risks Report 2023 (World Economic Forum) highlights environmental issues and climate change as top global

risks. By integrating sustainability into the minds of youth early, Lumina Circle directly contributes to solutions.

Why Fund or Partner with Lumina Circle?

1. **Proven Impact:** 100% engagement and excitement from participants at our first event. This is a program with tangible results that inspire.
2. **Future Workforce Development:** Aligning with Lumina Circle is an investment in the next generation of health, safety, and sustainability leaders.
3. **Measurable Outcomes:** Your support helps cultivate responsible, safety-conscious, and environmentally aware young leaders—driving innovation and preparing them for real-world challenges.
4. **Scalability:** This program has the potential to expand to multiple cities and underserved populations across the world, reaching thousands of young people and creating a ripple effect of change.

Join Us

In transforming education and empowering young minds to take charge of their safety, sustainability, and future careers. By funding or partnering with Lumina Circle, you're investing in a safer, greener, and more responsible world.

Together, we can make a lasting impact.

Let's collaborate to inspire, educate, and lead the change.

✦✦ Lumina Circle: Inspiring leaders of tomorrow. Transforming the world today.

✦✦ Together, let's build a brighter, safer, and more sustainable tomorrow.
